Part A (<Part title>) **2**

Question 1 (<Short question title>) **2**

Question 2 (<Short question title>) **3**

Part A

<Part title>

Questions 1–2

<Lead paragraph for the part.>

Question 1

<Short question title>

Question

<Restate the question here.>

Given values

a	<value with unit>

Setup

<What is given and what is being asked.>

Step 1 – <first step>

$$D = \frac{k_B T}{6\pi\eta a} \tag{1}$$

where <define the symbols>.

Step 2 – <second step>

<Continue. Reference equation (1) instead of repeating it.>

Answer

$$t = \frac{\langle x^2 \rangle}{2D}$$

Discussion

<Physical reading of the result.>

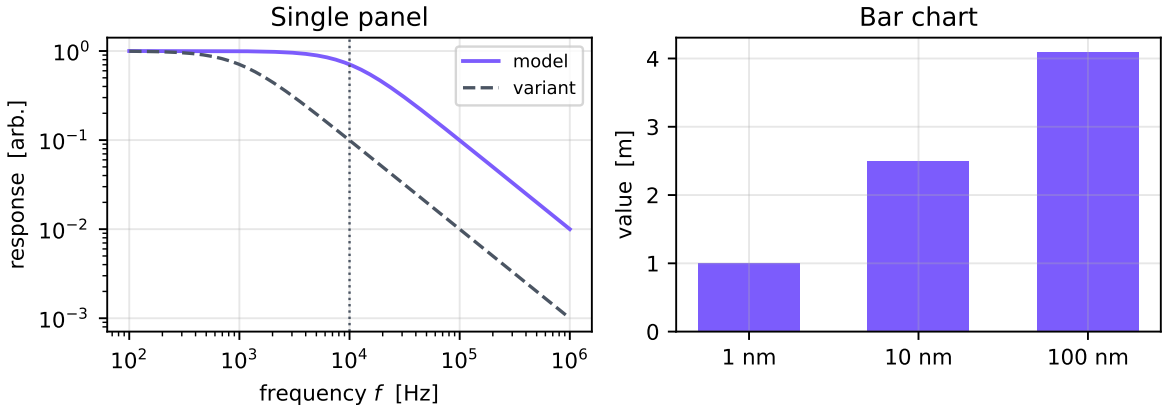

Figure 1. <What the figure shows.>

Question 2 <Short question title>

Question

<Restate the question here.>

Method

<What you do here.>

Answer

$$< result >$$

Discussion

<Physical reading of the result.>
